Subject: Microsoft

I have 5 computers in my household I have tried Redhat Linux, Caldera Linux and Corel Linux spent over \$150.00.

I could not get any of them to run any of these versions of Linux.I can run all versions of windows up to windows xp.

Consumers are not idiots bring out a good product and we will buy it .Microsoft is number one because they have a good

Product. [By the way none of these Linux operating systems gave me my money back!] I use Opera browser instead of

MS Explorer because I think it is better product All these companies should stop crying and bring a better product and we will buy it. No law will dictate that to me Market forces will! Price and quality will always win .So stop trying to compensate for mediocrity and let the market decide.
